

AI Based Career Recommendation System

About

This project is used to recommend suitable career options to students based on their skills, interests and other inputs.

The system takes user information and uses a machine learning model to give career recommendations.

Requirements

Python 3.x

VS Code or any Python IDE

Required Python libraries

Setup

1. Download the Project

Download or clone this repository and open the project folder.

2. Create Virtual Environment

Open the terminal in the project folder and run:

```
python -m venv venv
```

For Windows:

```
venv\Scripts\activate
```

3. Install Libraries

Run:

```
pip install -r requirements.txt
```

Configuration

Make sure the dataset and model files are present in their required folders.

If any file path is changed, update the path in the Python code.

Run

Run the application using:

```
streamlit run app.py
```

The application will open in the browser.

Enter the required details and submit them to get the career recommendation.
